### BIOGRAPHY

Born 1985, Jakarta, Indonesia

Lives and works in Bandung, Indonesia

Working primarily through the medium of installation, Bagus Pandega often challenges pre-conditioned relationships between objects and its viewer. In his works, Pandega assembles various electronic systems as 'modules' and explores objects such as voice recorders, cassette and record players, lamps and electronic circuit boards— among others— to construct his works. Many of his artworks become activated through the interaction of movement, sound and light.

Pandega received his Bachelor of Arts, majoring in sculpture and his Master of Fine Arts from the Faculty of Art and Design, Bandung Institute of Technology, Bandung, Indonesia in 2008 and 2015 respectively. His special solo project *Stomata* is currently on view at Esplanade Concourse, Singapore (2024-25). Pandega's selected solo exhibitions include *○* at ROH, Jakarta, Indonesia (2024); *A Pervasive Rhythm* at Yamamoto Gendai, Tokyo, Japan (2018); *Random Black* at ROH Projects, Jakarta, Indonesia (2016); and *A Monument That Tells Anything* at Cemeti Art House, Yogyakarta, Indonesia (2015). Selected group exhibitions include Art Basel Hong Kong with ROH, Hong Kong (2023); The 10th Asia Pacific Triennial at QAGOMA, Brisbane, Australia (2021-22); *Tiger Orchid* presented at Art Basel OVR: Miami Beach (2020); *Condo London* at Project Native Informant, London, UK (2020); *Ripples: Continuity in Indonesian Contemporary Art* at Taipei Dangdai, Taipei, Taiwan (2019); *Distorted Alteration* at Project Fulfill, Taipei, Taiwan (2018); Amsterdam Light Festival, Amsterdam, the Netherlands (2017); and *Clandestine Transgression* at Art Basel Hong Kong: Discoveries with ROH Projects, Hong Kong (2015). After winning third place at Bandung Contemporary Art Awards #2, Pandega completed his first residency at Le Centre Intermondes, La Rochelle, France in 2012. A nominee of the 2016 Sovereign Art Prize, Pandega had also collaborated with Adi Purnomo and Irwan Ahmett in presenting *Freedome, Indonesia Pavilion* at the London Design Biennale: Utopia by Design in 2016.

Bagus Pandega is a close collaborator of Kei Imazu. Their collaborative work has been presented at various international group exhibitions, including Bangkok Art Biennale: *Nurture Gaia* in Bangkok, Thailand (2024); *WAGIWAGI* at documenta fifteen, Hübner areal, Kassel, Germany (2022); *Frieze Seoul* at Coex, Seoul, South Korea (2022); *Declaring Distance: Bandung — Leiden* at Selasar Sunaryo Art Space, Bandung, Indonesia (2022); and *AAAHHH!!!* Paris Internationale, Paris, France (2018).

KASSEL, GERMANY

PHOTO COURTESY OF THE ARTISTS AND DOCUMENTA  
FIFTEEN

“WAGIWAGI” attempts to explore the island ecosystem from a non-human-centered perspective, including the creation of multiple groups of artists responding to natural environment issues such as sunlight, plants and land, as well as the basic system design in the architectural space. Through the dialectical thinking of the system “resource-commoner-institution”, and “island” may be an alternative field created in the process of identification, exploration, establishment, resistance, running-in and negotiation, pointing to A certain life practice of “living together” in stages also includes reflection on various reasons for “not being able to live together”.

In *Speculative Ecologies: Plotting Through the Mesh*, hypertext and multi-centrism are given priority ; multiple groups of authors point out that hypertext does not obscure the fact that it is a medium, its structure and effects on receivers are contrary to a linear perspective. As well as the scientific paradigms of the past establishing the human knowledge base, multi-centrism is a natural and generous way of constructing environmental ethics. (p.18-19).

However, after the 20th century, the Internet has brought about the drastic speed of change in modern society, making hypertext and multi-centricism challenging the only center and peripheral changes in the existing class system, reflecting the urban development, ecological evolution, landscape in which we live. In culture, the design of survival strategies and institutional changes reflect that the future field is unknown and changeable, more drastic than traditional agricultural society.

When we realize that concentric circleism leads to competition, advantage, invasion and succession in the ecological process, it is also manifested in the development of cities in various countries. In order to reduce the center distance and marginalization of physical space, multi-coreism has evolved along with decentralization. The democratization of and declassification seems to create fluidity and diversity within this range. In cross-cultural and interdisciplinary discussions, islands carry the collective interweaving of paradigms, ideas, emotions, labor, language, civilization, etc. We step into the tropics to discuss the problems and challenges faced by rainforests, practical exchanges bring people together in an innovative environment, reface the environmental problems we are in, and then solve short, medium and long-term problems and dialogues.

Borrowing from JB Jackson ‘s research on cultural landscape, cultural landscape is not static, but a constantly changing relationship between human and land. Landscape has two functions simultaneously in social life: on the one hand, it is a place created by human beings and the result of joint labor, but on the other hand, it structures the way we see things and operates on an ideological level. In addition to original ecological records, research and creation of ecological issues, team interaction and workshops, what is more important is to observe the interactive process of reconnecting with the land after returning to nature, and then using this experience to construct a new the environmental art practice model interprets the cross-border ecological relationship and the vision of the fate of people and species, and promotes academic and cultural exchanges and alternative narratives without borders.

Therefore, it brings out the scope of observation of the art project of “WAGIWAGI”, and the sunlight, plants and land in the natural ecology are used as the text. In the geographical Austronesian Siraya and Atayal languages, “Wagi” represents the sun; Wagiwagi means greeting

## ROH

to nature, and also What a great idea! The Chinese translation “Wa” represents the tile, which carries the media of the boundary between nature and human; the former “Gi” means collective and collaborative; the latter “Gi” echoes the identity and belonging of all things.

The natural environment inspires us to explore the interpretation of the living field, to find the face and meaning of this island land. Irish poet Seamus Heaney once said, “To know who you are, you have to have a place to come from”. We have lots of local feelings, but we must first recognize where we come from – human perspective, or non-human center dimension, what is the positive role of ecology in this field? How to carry out civic open governance? How far will science lead us? This will be the challenging journey full of uncertainty. With the development of society and economy and the rise of cities, consumption activities in densely populated areas have led to alienation and unfamiliarity with nature. How can we care for ecology from urban living?

Today, we choose to get close to nature, re-understand the history and the present of the land, and explore spatial scenes and regional emotions through the reconnection of people and the environment; reading the topographical writings written by writers, once again opening a different dimension of life vision. The contemporary interpretation of the ancient’s “harmony between man and nature” adds some imaginary space to the contemporary ethical concept of harmonious coexistence between man and nature. When greenery enters the house, integrates into the daily life and serves as a bridge for sustainable life, how can we use our existing life experience to re-understand the people and land in our hometown, and look back at the current nature and human life texture from the future.

SUAVEART from Taiwan and Jatiwangi Art Factory from Indonesia built a space of about 300 square meters in Majalengka, West Java, which serve as a cultural exchange center between Taiwan and Indonesia, providing the dynamic platform for cultural researchers and global citizen. Combined with Taiwanese architect design, the construction method is taken from the local with bamboo, wood and brick as the main materials. It is closely connected with the local cultural community while responding to the current low-carbon emissions. The construction process is unveiled simultaneously in Indonesia and at documenta fifteen Kassel, Germany in 2022.
